Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I need a faster way to analyze socioeconomic data." • "Manual calculations are time-consuming and prone to errors." • "Can I get reliable HDI insights instantly?"	THINKS • "There must be a simpler way to predict development levels." • "AI can provide more accurate and faster results." • "Learning advanced data tools feels overwhelming."
DOES • Collects socioeconomic metrics (GNI, Education, Health). • Manually compares data using basic spreadsheets. • Searches for automated prediction tools online.	FEELS • Frustrated: By the repetitive manual data entry. • Anxious: About the accuracy of manually calculated results. • Hopeful: For a modern, AI-driven solution.
