

Project Executable Files

Date	4 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	N/A
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	N/A

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

-- # Project Structure Overview
...
Project/
├── Flask/
│   ├── app.py           # Main Flask application
│   ├── templates/       # HTML templates for the user interface
│   └── locustfile.py     # Performance testing configuration (Locust)
├── Dataset/             # Dataset used for training and testing
├── Training/            # Machine learning model training scripts
├── README.md            # Project documentation and setup instructions
└── requirements.txt     # Python project dependencies
...

### Directory Description

**Flask** -- Contains the Flask web application.

**app.py** -- Main application file responsible for running the web server.
**templates** -- Stores HTML templates used to render the application's user interface.
**locustfile.py** -- Defines performance and load testing scenarios using Locust.

**Dataset** -- Contains the datasets required for model training, validation, and testing.

**Training** -- Includes scripts and resources used to train the machine learning model.

**README.md** -- Provides project overview, installation steps, usage instructions, and other documentation.

**requirements.txt** -- Lists all Python packages and dependencies required to run the project.
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Running on Localhost)
Login Credentials (Demo)	N/A (No authentication required)
Platform / Hosting Provider	Local Environment (PyCharm/Terminal)
Repository Link	https://github.com/mudeganeshnaik/AI-ML--Human-Development-Index
Demo Video Link	N/A (or provide your link if you made one)

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.10+ (Ensure it is added to your PATH)
- Git (For cloning the repository)
- PyCharm or any Code Editor

Step 1: Clone the repository
 git clone https://github.com/mudeganeshnaik/AI-ML--Human-Development-Index
 cd AI-ML--Human-Development-Index

Step 2: Install dependencies
 pip install -r requirements.txt

Step 3: Configure the environment
 (Note: If you don't have an .env file, you can skip this step.)
 cp .env.example .env
 # Update the .env file with your specific configuration keys.

Step 4: Database Setup
 (Since this is a Flask project, we don't use 'manage.py'.)
 Database migrations are not required for this project.
 If you are running it for the first time, ensure your datasets are available in the Dataset folder.

Step 5: Start the application
 Navigate to the Flask directory and run the application:
 cd Flask
 python app.py

Step 6: Open the application
 Open your browser and visit:
 (http://127.0.0.1:5000)

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Currently running only on local machine.	Access via [http://127.0.0.1:5000] (http://127.0.0.1:5000)
2	No user authentication implemented	N/A
3	Testing requires manual setup of (locustfile.py).	Instructions provided in Step 4
