

Technology Stack

Date	4 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

TechnologyStackDetails

S.No	Architecture Component /Layer	Technology Chosen	Justification /Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	<i>HTML5, CSS3, JavaScript, Bootstrap</i>	<i>Simple, responsive design and easy interaction for researchers.</i>

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	<i>Side Python (Flask or FastAPI)</i>	<i>Fast, lightweight framework, perfect for AI/ML integration.</i>
3	Database /Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	<i>SQLite or MySQL</i>	<i>Reliable storage for storing socioeconomic metrics and user records.</i>
4	Cloud /Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	<i>Render or Streamlit Cloud</i>	<i>Quick, free deployment for hosting web-based ML applications.</i>
5	VersionControl & CI/CD	<i>Git & GitHub</i>	<i>Essential for code versioning, collaboration, and repository management.</i>

	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	<i>Pandas, Scikit-learn, NumPy</i>	<i>Powerful libraries for data manipulation and AI/ML model building.</i>
